

Mihály was working as a technical architect for our account DekaBank. His job was to plan and constantly improve our environment from each aspect. He was responsible to manage our projects and drive those issues forward, which required a deeper technical background. He is responsible for all platforms and technologies used at our company, from platforms like Unix, Linux, Windows till Storage, backup, etc.

Mihály is undoubtedly one of our biggest assets in our team. Not only is he technically constantly overperforming (what is also the reason why we chose him as our Architect for our customer), but he is also a hard working person, who is not afraid of any challenge and willing to take time and effort to solve any issues in order to make things happen. He developed his business savviness a lot and understand underlying processes and can think of the architectures financial aspects too. For me it was one of the best experiences in my professional career to work with him as he is not only professionally a really gifted individual, but has also a great personality with whom it's always a privilege to work with.

Should you need further details, please do not hesitate to call me.
